

PRESS / Environmental Commitment

Mowing your yard can feel like following an old clunker down the highway – you inhale gas fumes the entire way. Not anymore. GreenWorks electric and cordless products allow you to care for your yard without raising up a cloud of gas emissions that's harmful to you and the environment.

Stop wearing out your arm on a pull cord. Stop filling gas cans. The GreenWorks Lithium System of Tools requires none of that – plus our charging systems have received the Environmental Protection Agency's ENERGY STAR® approval rating.

ENERGY STAR-approved battery chargers, which are held to tight efficiency guidelines determined by the Environmental Protection Agency and Department of Energy, reduce energy usage by an average of 35 percent from conventional yard tools.

Gas-powered lawn mowers launch as much pollution into the air in one hour as a vehicle does while driving 100 miles, the EPA reports. With more than 30 million lawn mowers in the United States, it takes a lot of pollution to trim the nation's yards.

But you can keep your yard – and the environment – a little greener.

No Emissions – Ever.

The GreenWorks products that you purchase have a ZERO carbon footprint. We'll say that again – our entire product line will *never* release an ounce of carbon emission into the air.

Plus, this efficiency requires no sacrifice from you. We'll provide all the power you need without polluting the air or forcing you to keep hauling your gas can to the nearest station (especially in the middle of a mow). No more tune-ups or maintenance. No more emissions.

Stop The Spills.

Fifty-four million Americans mow their lawns every weekend, according to the EPA, using 800 million gallons of gas each year. Along the way, homeowners spill more than 17 million gallons of gas while refueling.
